DOWNLIGHT COVERS

Fire Rated

Product Overview

Trafalgar Downlight Covers are an intumescent cover used to fire rate the penetrations created by the installation of downlights or speakers into fire rated plasterboard ceilings. In a fire situation the intumescent material reacts, sealing off the penetration and downlight, stopping the passage of flame and hot gases into the ceiling cavity. The Trafalgar Downlight Cover also prevents dust and other debris from contacting the rear of the hot downlight, reducing the chances of accidental ignition.

Trafalgar Downlight Covers have been fully fire tested in accordance with AS1530.4 and can achieve a 2 hour fire rating with incipient spread of fire, the latter of which is required for all fire rated ceiling penetrations by the National Construction Code.

Trafalgar Downlight Covers are easy to install, in either new or retrofit applications. As modern architects and builders continue to specify downlights in their designs, Trafalgar's Downlight Covers will become an integrated part of the Australian building industry.

To maintain market leadership, Trafalgar stay up to date with the latest technologies and trends in passive fire protection and contemporary construction techniques. **We are 70 years strong and still innovating!**

DOWNLIGHT COVERS

Fire Rated

Product Overview

EASY INSTALLATION

Downlight removed and supply disconnected

Wiring loom threaded through cover

Cover rolled into a tight cylinder

Cover fed through downlight cut-out

L section of wire frame clears the underside of the ceiling and fits into place – excess is removed

Downlight reconnected and fitted as normal with transformer outside the cover

APPLICATION:

The Trafalgar Downlight Cover has been developed to provide maximum protection for penetrations created by the introduction of small, medium and larger sized downlights, and to allow for an easy DIY installation. They are also suitable for use over smoke detectors and speakers.

SUITABLE FOR:

Trafalgar Downlight Covers are suitable for use in suspended ceiling systems and also timber, steel or concrete beams/joists protected by plasterboard.

SPECIFICATION:

All downlight penetrations are to be sealed, to maintain the fire rating of the ceiling in accordance with AS1530.4 using Trafalgar Downlight Covers as detailed in Trafalgar's published installation instructions.

DOWNLIGHT COVERS

Fire Rated

Technical Specifications

PRODUCT DESCRIPTION

Fire Rating	2 hours with resistance to the incipient spread of fire.
Colour and Appearance	Black and conical
Testing	Tested and approved in accordance with AS1530.4.
Storage and Handling	Downlight Covers should be stored in a cool dry location.
Safety	Please refer to product MSDS for full safety information.
Also Available	Trafalgar offers a complete range of other fire stopping to achieve integrity ratings.

IMPORTANT NOTES:
